

Concave Rotary Table

Controlled Accumulation for Delicate Products

Spec Sheet Model

RPOTSS1200-CC

The EQM Concave Rotary Pack-Off Table is designed to manage controlled accumulation of flexible, non-standing products at the end of packaging lines. Its concave stainless steel tabletop naturally guides product toward the centre during rotation, creating a reliable buffer for manual packing, inspection, or secondary handling.

Built for food-grade environments, the table provides smooth, consistent rotation with minimal operator input. Variable speed control allows accumulation rates to be matched to upstream equipment, helping reduce line pressure and improve workflow efficiency.

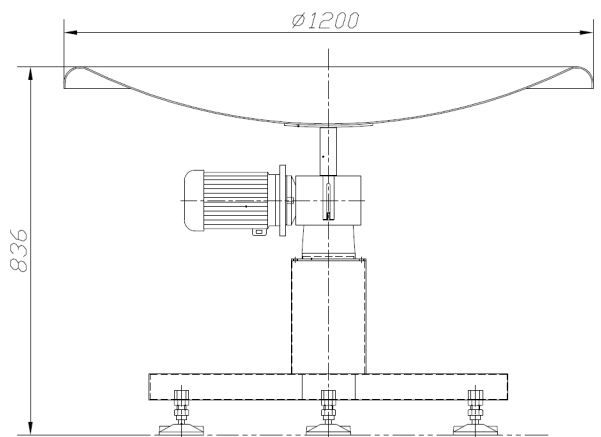

SPECIFICATIONS

- Stainless steel concave tabletop, 1200 mm diameter
- Stainless steel pedestal frame
- Single-phase geared drive with variable speed control
- Working height: 900 mm $\pm$ 100 mm to tabletop
- Hygienic 100 mm levelling castors (optional)
- Compact footprint for easy line integration

APPLICATIONS

- Bakery – biscuits, buns, snacks
- Fruit – bagged or wrapped
- Confectionery – wrapped bars, lollies
- Post-packaging lines (flowwrapper, FFS, bag sealer)
- Vacuum-packed or tray-sealed products

PACK

Fruit and Vegetable
Packing Lines.
